Double Tongue Markers

FEATURES: Keyes-Davis Metal Markers provide identification with minimum labor, are permanent and will withstand the elements, abrasion, and corrosion. Common uses include: coding, instructions, warning, banding, grouping and tying. Markers are cleanly blanked from the finest materials and will last years under normal usage.

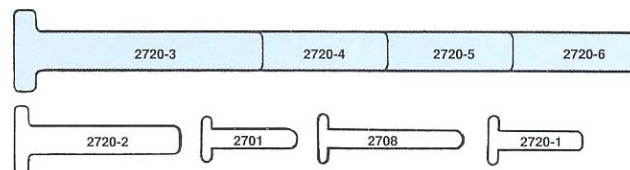

USED BY: Metal Markers are primarily used by the OEM Electrical and Electronic trades as well as service and field use. Manufacturers of aircraft, controls, cables, motors, panel boards, autos, missiles and ordnance have also found Keyes-Davis markers a valuable asset to their products. Markers Manufactured to government specifications MS39020 & MIL B.43436 on request.

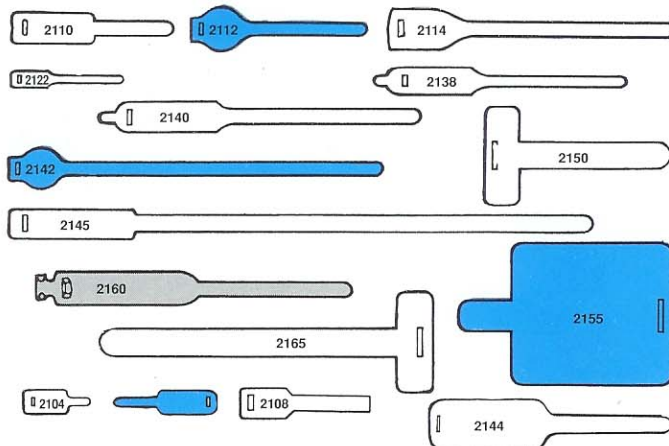

Wrap-around

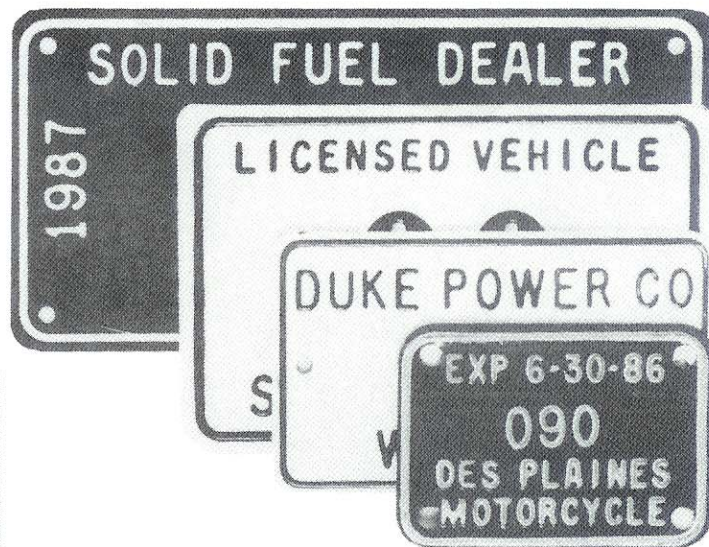

STANDARD MATERIAL: Most Metal Markers are made from .012 and .020 aluminum with stainless steel, zinc, brass, copper and lead also available in standard gauges. Aluminum markers are also available with color anodized, painted and iridite finishes.

SPECIAL MARKERS: We will be happy to quote on modifications to our markers, or completely new designs if one of our standards will not fill your requirement.

Tongue and Slot Markers

LETTERING

All lettering is embossed. Small plates use $\frac{3}{16}$ " and $\frac{5}{16}$ " and $\frac{1}{2}$ ". If your required text will not fit our plate or you require a special insignia or design, we will be happy to quote on a special engraved stamp. (Engraved stamps are a one-time cost item which we usually hold in our plant for use on subsequent orders.)

STANDARDS

Our standard plate sizes, shapes, colors, and hole patterns are listed for your convenience and provide the best price and delivery. We can supply other sizes, shapes, hole and slot patterns, and colors. Send sketch and details for a quotation.

STYLE EO

Special style EO is available only in 20 gauge (.032") plain or anodized aluminum (red, blue, yellow, or green) with stamp indented (not embossed) text and numbers. Marking may be enamel filled with a contrasting color.

HOW TO ORDER

When ordering specify — Quantity — Style —
Hole or Slot Pattern — Background Color —
Wording — Numbering Sequence

COLORS

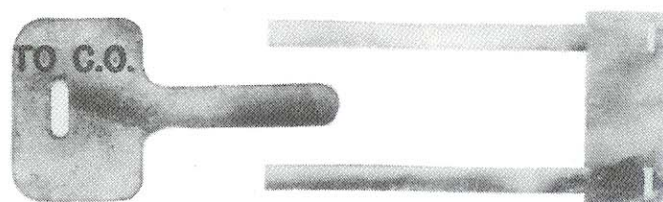

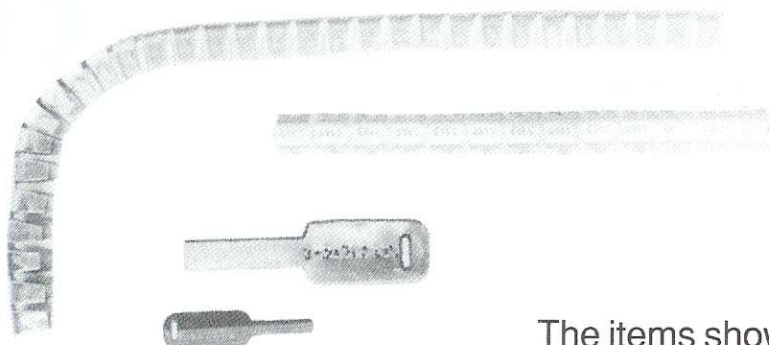

Keyes-Davis license plates have a one-color background with border, text, and numbers painted a contrasting color.

Standard background colors are red, blue, white, green, black, and yellow. Any contrasting color may be used for borders, text and number.

Other customized colors—as shown in our illustrations—supplied to order.

MATERIAL

We recommend .020" thick aluminum with a baked enamel background color. Aluminum provides a number of advantages; avoids steel's rust problems, is lightweight for storage and handling and shipping. We also supply steel plates (.018") when requested.

The items shown in this catalog represent only a sampling of the many sizes and styles that are available.
